# TKF M5

# Trass lime grout mortar

#### Grout mortar for all types of masonry

Standard masonry mortar M5 acc. EN 998-2 NM IIa according to DIN 20000-412

■ colours: grey, coloured

## **APPLICATIONS**

- for retrospective grouting of all types of masonry, particularly suitable for natural stone masonry
- for renovation and restoration of visible masonry
- for interior and exterior grouting
- also available as a wall coping version with increased flank adhesion and reduced water absorbency (W-value approx. 2.0 kg/(m²h0.5)

## **PROPERTIES**

- mineral
- good workability
- weather and frost resistant after hardening
- adjusted water retention properties
- can also be supplied dyed by agreement, by mixing in coloured sands and/or iron oxide pigments
- can also be supplied as a machine-compatible version on request
- if required, also available as a highly sulphate-resistant version on request

### COMPOSITION

- Trass lime according to DIN EN 459-1
- graded stone aggregates in accordance with DIN 13139

#### **SUBSTRATE**

### Properties/tests

- Masonry and substrates must be firm, load-bearing, frost-free and free of adhesion-reducing residues.
- Joint flanks must be frost-free, dry, free of oil, paint, dust as well as soft and loose mortar residue.

#### **Pretreatment**

- Before grouting masonry for the first time, the joint must be cleared out so deep that it equates to twice the joint width, but at least 2 cm.
- For brick masonry, the same procedure must be used, whereby attention should always be paid that the flank adhesion is ensured.
- Cleaning the joint flanks with a high pressure or water jet is recommended.
- The joints are to be pre-wet depending on their absorbency.
- When pre-treating the areas being worked on, the different absorbency levels of the materials is to be taken into account. The pre-treatment is to be adapted to the circumstances by observing the water absorbency capacity. For instance, it may be noticed that low-absorbent, dense stone (e.g. granite) does not need much water, whilst the mortar in the joint is very absorbent. If this is not sufficiently pre-wetted before grouting, too much water will be extracted from the newly introduced mortar. This leads to inadequate bonding strengths and reduced grouting strengths. This also applies to processing in several layers, due to grouting over a depth of 2 cm.

Cleaning the tools ■ Clean all tools and equipment with water immediately after use.	Cleaning the tools	■ Clean all tools and equipment with water immediately after use.

# **PACKAGING**

■ 30 kg/sack

# STORAGE

■ Store sacks appropriately and in dry conditions on pallets.

# QUANTITY REQUIRED / YIELD

- consumption: depending on application
- yield: app. 18-21 l fresh mortar per 30 kg/sack

# TKF M5

# Trass lime grout mortar

TECHNICAL DATA	
Binder base	Trass lime
Product type	Standard masonry mortar
Compressive strength class	M5 according to DIN EN 998-2
Mortar group	NM IIa according to DIN 20000-412
Compressive strength	≥ 5 N/mm²
Grain	0 – 2 mm, 0 – 4 mm
Water requirement	approx. 5.0 l per 30 kg/sack
Colour	grey

All data are average values that were determined under laboratory conditions according to relevant test standards and application tests. Deviations are possible under practical conditions.

### SAFETY AND DISPOSAL INSTRUCTIONS

- This product produces an alkaline reaction when it comes into contact with moisture/water. Therefore ensure that skin and eyes are protected. If it should come into contact with the skin or eyes, rinse them thoroughly with water. See a doctor immediately if it comes into contact with the eyes.
- Further information can be found in the safety data sheet at www.tubag.de.

### Disposal

- Dispose of the material in accordance with the official regulations.
- Completely empty and recycle the packaging.
- Dispose of hardened product in accordance with the local regulations. Do not allow to enter the sewer system. Dispose of the hardened product in the same way as concrete waste and slurries. Waste code according to the Ordinance on the European Waste Catalogue depending on the origin: 17 01 01 (concrete) or 10 13 14 (concretewaste and concrete slurries).

# **GENERAL INFORMATION**

This information sheet provides only general recommendations. Should you have any queries relating to a specific application, please contact our technical sales advisor or call our hotline: +49 541 601-601. Since natural raw materials are used, the values and properties described may vary somewhat. All of the details given are based on our current knowledge and experience and on the assumption that the materials are professionally applied and used for their normal purpose. All of the details are non-binding and do not release users from their duty to undertake their own tests to ensure suitability for the intended application. Due to the effects of different weather, processing and construction site conditions, no guarantee can be given for the general validity of all details. We reserve the right to make changes as a result of further development of the product and applications engineering. The general rules for construction engineering, the valid standards and guidelines, and the technical working guidelines must be observed. The publication of this technical data sheet renders all previous editions of this data sheet void. Please obtain the latest information from our website.
